OBJECT ORIENTED PROGRAMMING WITH C++

ASSIGNMENT WORK-2 DATE: 30th December 2023

DHANUSH.V.A

192211274

1. Write a program to read in two integers and perform the following operations on them: addition, subtraction, multiplication, division, and modulo.

```
Program:
#include<iostream> using
namespace std;
int main(){
      int x,y;
      cout<<"Enter two numbers"<<endl;
      cin>>x;
cin>>y;
            int
sum=x+y;
            int
diff=x-y;
            int
mul=x*y;
            int
div=x%y;
      cout<<"The sum is "<<sum<<endl;
cout<<"The difference is "<<diff<<endl;
cout<<"The product is "<<mul<<endl;</pre>
      cout<<"The modulo is "<<div<<endl;
      return 0;
}
```

Output:

```
Enter two numbers

5

4

The sum is 9

The difference is 1

The product is 20

The modulo is 1

------

Process exited after 3.515 seconds with return value 0

Press any key to continue . . .
```

2. Program to determine the integer is odd or even

```
Program:
#include<iostream> using
namespace std;
int main(){
     int n;
     cout<<"Enter the number
                      if(n%2==0){
"<<endl;
           cin>>n;
           cout<<"It is an even number";
}
     else{
           cout<<"It is an odd number";</pre>
     }
}
Output:
 Enter the number
 It is an even number
 Process exited after 2.218 seconds with return value 0
 Press any key to continue . . .
```

3. Program to compute the average of three integers

```
Program:
#include<iostream> using
namespace std;
int main(){
      int x,y,z;
      cout<<"Enter three
numbers"<<endl; cin>>x; cin>>y;
cin>>z;
```

```
int avg=(x+y+z)/3; cout<<"The
averaage is "<<avg;
    return 0;
}</pre>
```

Output:

4. Program to check two numbers are equal or not **Program**:

```
#include<iostream> using
namespace std;
int main(){
        int x,y;
        cout<<"Enter the two numbers"<<endl;
        cin>>x;
cin>>y;        if(x==y){
            cout<<"They are equal";
        }
        else{
            cout<<"They are not equal";
        }
}</pre>
```

Output:

5. Write a program to read in two Floating numbers and perform the following operations on them: addition, subtraction, multiplication, division, and modulo.

```
Program:
#include<iostream>
using namespace std; int
main(){
        float x,y;
        cout<<"Enter two numbers"<<endl;
     cin>>x:
cin>>y;
                       float diff=x-y;
     float sum=x+y;
                                         float
mul=x*y;
           float div=x/y;
                             cout<<"The sum is
"<<sum<<endl; cout<<"The difference is
"<<diff<<endl;
                 cout<<"The product is
"<<mul><!
     cout<<"The modulo is "<<div<<endl; return
0;
}
Output:
 Enter two numbers
 5.23
 10.85
```

6. Program to check the character is a vowel or consonant

```
Program:
#include<cctype>
#include<iostream> using
namespace std;
int main(){
```

```
char x;
            cout<<"Enter the character"<<endl;
            cin>>x;
            char y=tolower(x);
         if(y=='a' || y=='e' || y=='i' || y=='o' || y=='u'){
   cout<<"It is a vowel";
            }
            else{
               cout<<"It is a consonant";
            }
  }
   Output:
    Enter the character
    It is a vowel
    Process exited after 3.516 seconds with return value 0
    Press any key to continue . .
7. Program to check the number is positive, negative or zero
  Program:
  #include<iostream> using
   namespace std;
```

```
int main(){
          int x;
          cout<<"Enter the number";
          cin>>x;
          if(x>0){
             cout<<"Positive number";
          }
          else if(x<0){
             cout<<"Negative number";</pre>
          }
          else{
             cout<<"Zero";
}
```

```
}
```

Output:

Program:

8. Program to determine which number is greater among two integers

```
#include<iostream> using
namespace std;
int main(){
           int x,y;
       cout<<"Enter the two numbers"<<endl;
cin>>x; cin>>y;
           if(x>y){}
                 cout<<"First number is greater";</pre>
           }
           else{
                 cout<<"Second number is greater";</pre>
}
Output:
Enter the two numbers
 5
 First number is greater
 Process exited after 4.374 seconds with return value 0
 Press any key to continue . . .
```

9. Program to read a floating-number and round it to the nearest integer using the floor an ceil functions.

```
Program:
#include<iostream>
#include<cmath> using
namespace std;
int main(){
            float x;
            cout<<"Enter the number"<<endl;
```

10. Program to

swap two numbers using bitwise XOR operator

11. Largest among

three numbers using ternary conditional operator

```
#include<iostream> using
namespace std; int main(){
          int x,y,z,l;
           cout<<"Enter the three numbers"<<endl;
      cin>>x; cin>>y;
cin>>z; l=x;
      if(y>I){
l=y;
      }
      if(z>I){
l=z;
      }
           cout<<"The greatest of three numbers is "<<I;</pre>
}
Output:
 Enter the three numbers
 5
 6
 The greatest of three numbers is 7
 Process exited after 4.732 seconds with return value 0
 Press any key to continue . . .
```

12. Program to

Output:

Program:

check two numbers are equal or not using ternary conditional operator

```
Program:
#include<iostream>
#include<string> using
namespace std; int
main(){
        int x,y; string
result;
        cout<<"Enter the two numbers "<<endl;
        cin>>x; cin>>y;
        result=(x==y)? "They are equal": "They are not equal";
        cout<<result;
}</pre>
```

13. Program to

check the integer is divisible by 3 or not using ternary conditional operator

```
Program:
#include<iostream>
#include<string> using
namespace std;
int main(){
         int x;
         string result;
         cout<<"Enter the number"<<endl;
         cin>>x;
         result=(x%3==0) ? "Divisible by three" : "Not divisible by three"; cout<<result;
}</pre>
```

Output:

```
Enter the number
9
Divisible by three
------
Process exited after 2.084 seconds with return value 0
Press any key to continue . . .
```

14. Program to

print numbers from 1 to 10 using for loop

```
Program:
```

```
#include<iostream> using
namespace std;
int main(){
        cout<<"Printing numbers 1 to 10"<<endl;
for(int i=1;i<11;i++){</pre>
```

```
cout<<i<<endl;
}
}
Output:

Printing numbers 1 to 10
1
2
3
4
5
6
7
8
9
10</pre>
```

```
15.
          Factorial of
   a number using for loop
   Program:
   #include<iostream>
   using namespace std; int
   main(){
         int x,fact=1;
                             cout<<"Enter
  the number"<<endl;
         cin>>x;
         for(int
   i=1;i< x+1;i++){
  fact=fact*i; }
         cout<<"The factorial is "<<fact;</pre>
   }
  Output:
```
